## How to decrease fraud in the healthcare sector: presentation of a game-changing and innovative tool in Estonia

### Short description

Providing healthcare services in Estonia means you must be as transparent as possible. In Estonian Health Insurance Fund, they have built a system for healthcare providers where they can see all the services for example an hospital has provided and what was the cost of it. The system has a catch – everybody can see this data.

This has made the system transparent and reduced the likelihood of fraud as we have two layers of protection – we are watching and your neighbor as well.

### Defined goals

- Give an overview of the system
- Real life examples of the challenges of building this system
- Fraud examples

### Contact details for more information
